Introduction:

This plan serves as the primary guide and record for the deployment of notebooks, views, and supplementary configuration associated with the reporting component deployment in the Algorand Network. This document includes:-

- The context for the system
- Contract Creation instructions
- Ui Deployment instructions
- User Guide to test the functionalities.
- Evidence that is required to document the execution of the installation process, which may include screenshots captured in this document or links/references to other documents produced during the installation.

Prerequisite:

This Technical Installation Plan uses the following tools.

Table 2 – For UI Deployment

Tool	Definition	Link
VS code	Visual Studio Code is a code editor redefined and optimized for building and debugging modern web and cloud applications	https://code.visualstudio.com/download
NodeJs	As an asynchronous event-driven JavaScript runtime, Node.js is designed to build scalable network applications	https://nodejs.org/en/download/
Yarn	Yarn is an alternative npm-client used for working with JavaScript as a package manager that. It also allows us to share code with other developers around the world and use solutions from other developers.	https://www.liquidweb.com/kb/how-to-install-yarn-on-windows/

IRIS			
Document Title	Installation Guide for IRIS		
Document Identifier	Ver	System/Service Name/Identifier	Page No
1	1.0	Self-Sovereign NFT based Digital Identity (DID) and KYC Verification Platform	4

Git	Git is software for tracking changes in any set of files, usually used for coordinating work among programmers collaboratively developing source code during software development. Its goals include speed, data integrity, and support for distributed, non-linear workflows	https://git-scm.com/downloads
GitHUB	GitHub, Inc. provides Internet hosting for software development and version control using Git.	https://github.com/login https://code.visualstudio.com/docs/editor/github
Algo signer	AlgoSigner is an Algorand wallet extension for Chrome that lets users approve and sign transactions that are generated by Algorand applications	https://developer.algorand.org/articles/connecting-webapps-using-algosigner/
Purestack	PureStake provides highly reliable, highly secure access to native Algorand REST APIs for MainNet, TestNet and BetaNet. -Create an account on purestack	https://developer.purestake.io/
Java microservice	Java based microservice application to help the front end application. This includes the features such as 1) Manage KYC 2) Manage Users 3) Manage images for identity proofs	https://spring.io/projects/spring-boo t
pinata	Pinata is the simplest way to upload and manage files on IPFS.	https://www.pinata.cloud/

EC2 - IRIS API build instructions:

Step 1: Navigate to.

```
cd /opt/build_area/iris_/iris_api/
```

Step 2: Execute

```
mvn clean install
```

Step3:Execute

```
sudo docker build -t algorand/iris.service:1.0 .
```

Here are the Steps for Deploying the UI Codebase.

TYPE-1

NOTE: If you want to deploy the UI with your Pinata account(Secret API Key, API Key), Purestack account API. Kindly follow the below step.

STEP1:

Clone this below Github repository

<https://github.com/BosonLabs/IRIS-UI>

STEP2:

Open Config.json file and replace

PinataSecretAPIKey,

PinataAPIKey,

PurestackAccountAPI

Values with the values you have.

IRIS			
Document Title	Installation Guide for IRIS		
Document Identifier	Ver	System/Service Name/Identifier	Page No
1	1.0	Self-Sovereign NFT based Digital Identity (DID) and KYC Verification Platform	7

STEP3:

Run the following command for installing necessary packages.

```
yarn install
```

Step4:

Run the following command for Deploying it in localhost.

```
yarn start
```

This command Runs the app in the development mode.

Open <http://localhost:3000> to view it in the browser.

The page will reload if you make edits.

You will also see any lint errors in the console.

Document Identifier	Ver	System/Service Name/Identifier	Page No
1	1.0	Self-Sovereign NFT based Digital Identity (DID) and KYC Verification Platform	8

TYPE-2

NOTE: If you want to deploy the UI with IRIS Pinata account(Secret API Key, API Key), Purestack account API. Kindly follow the below step.

STEP1:

Clone this below Github repository

<https://github.com/BosonLabs/IRIS-UI>

STEP2:

Run the following command for installing necessary packages.

```
yarn install
```

Step3:

Run the following command for Deploying it in localhost.

```
yarn start
```

This command Runs the app in the development mode.

Open <http://localhost:3000> to view it in the browser.

The page will reload if you make edits.

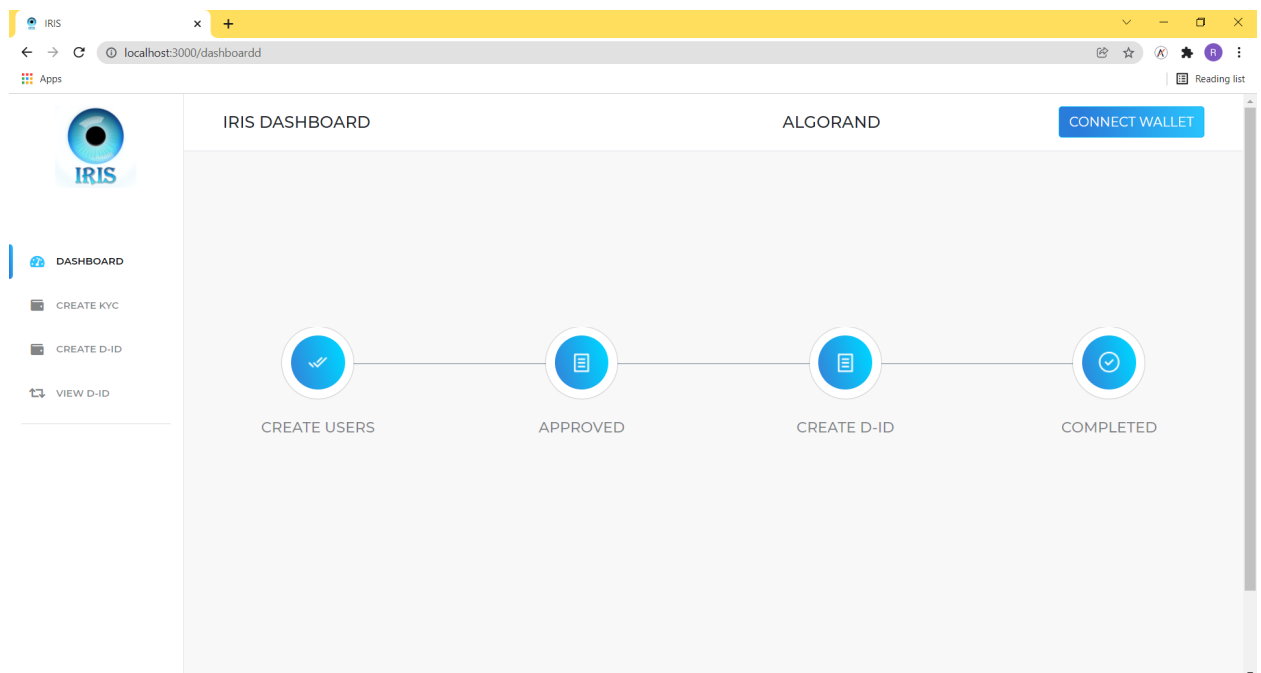

You will also see any lint errors in the console.

HOW TO CREATE KYC?

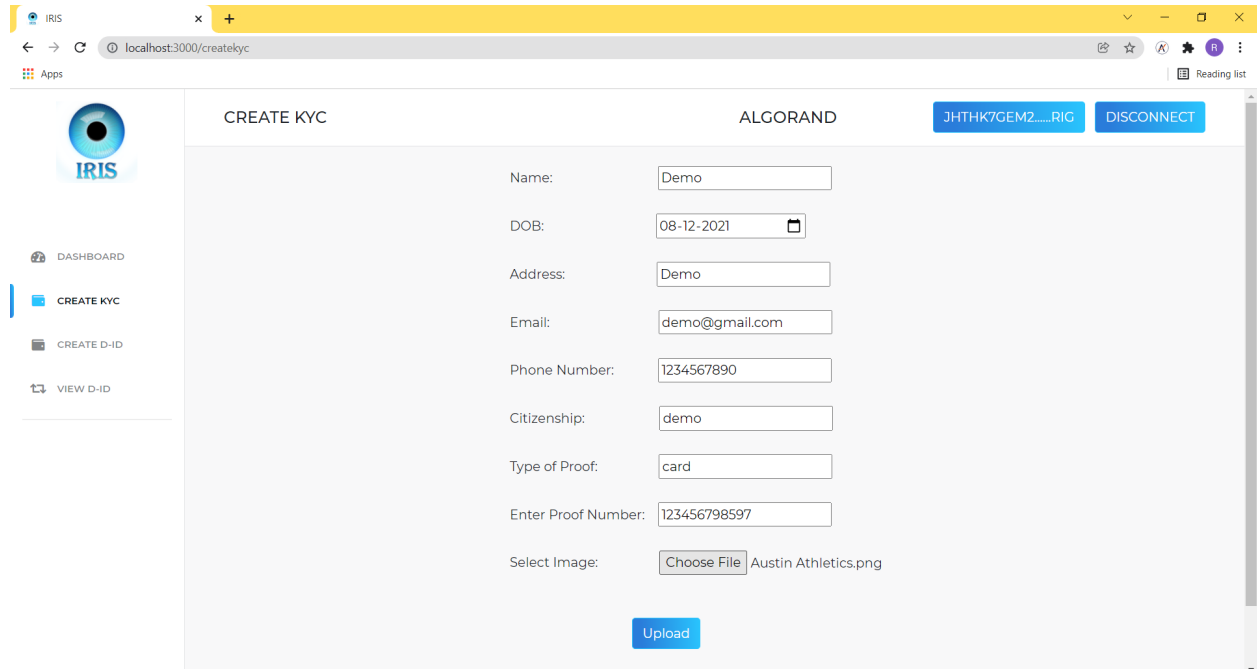

1. Enter your KYC NAME
2. Enter your DOB
3. Enter your ADDRESS
4. Enter your E-MAIL
5. Enter your PHONE NUMBER
6. Enter your CITIZENSHIP
7. Enter your TYPE OF PROOF
8. Enter your PROOF NUMBER
9. Upload your KYC Image
10. Clicking a button in the Upload

The screenshot shows a web browser window with the URL `localhost:3000/createkyc`. The page title is "IRIS" and the main heading is "CREATE KYC". The user is logged in as "ALGORAND" with a session ID "JHTHK7GEM2.....RIG" and a "DISCONNECT" button. The form contains the following fields:

- Name:
- DOB:
- Address:
- Email:
- Phone Number:
- Citizenship:
- Type of Proof:
- Enter Proof Number:
- Select Image: No file chosen

An "Upload" button is located at the bottom of the form. The left sidebar shows a navigation menu with "DASHBOARD", "CREATE KYC" (highlighted), "CREATE D-ID", and "VIEW D-ID". The bottom status bar shows the time as 12:00 and the date as 31-12-2021.
